

DOMOYA

Digitalizing tradition to build the future of housing in Africa

Smart, Affordable, and Sustainable Housing

Project Lead: Jesugo Abel DOTONOU

Date of Drafting: May 2026

The Housing Challenge in Benin

The real estate market in West Africa suffers from a profound structural imbalance:

- **Critical Housing Deficit:** Estimated shortage of more than 300,000 decent units in Benin.
- **Major Energy Inflation:** Unpredictable and constantly rising electricity bills weighing heavily on households.
- **Discomfort & Insecurity:** Low-end rental options that are energy-intensive, poorly insulated, and lacking security.
- **Extreme Polarization:** The emerging middle class and professionals are excluded from the market, trapped between dilapidated informal housing and inaccessible luxury (> 80M FCFA).

The Solution: Affordable Smart Housing

DOMOYA designs turnkey smart villas that combine high technology, ecology, and affordability:

- **Sustainable Eco-construction:** Use of bio-sourced and local materials (Compressed Stabilized Earth Blocks - CSEB) guaranteeing high thermal inertia and a low carbon footprint.
- **Ready-to-Live Units:** Optimized modern homes (ranging from high-end studios to 2-bedroom/F3 apartments) meeting new urban standards.
- **Native Integrated Technology:** The DOMOYA Kit (IoT) is embedded directly from the foundations to optimize resource consumption daily.

The Technology: The DOMOYA Kit (IoT)

Our value-added lies in the native fusion of hardware and software to reduce energy bills by **30%**:

Smart Energy	Smart Water	Secure Access
30% Savings	Real-Time Leak Alerts	Smartphone Control
Automated management of lighting and air conditioning using motion sensors.	Continuous monitoring of water flow and automatic shut-off in case of anomalies.	Secure locking and unlocking of physical entry points via a mobile application.

Administration Backend: Developed with Django, the system manages leases, automates payments via Mobile Money, and calculates a proprietary credit score for tenants.

Market Opportunity & Target Audience

A dynamic market with unserved, solvent demand:

- **Rapid Urbanization:** Urban growth rate of 4.5% per year in Benin, increasing real estate pressure.
- **Young Active Professionals:** Over 50,000 young middle-class professionals, civil servants, and entrepreneurs seeking comfort, modernity, and security.
- **The Diaspora:** Massive demand from West African investors living abroad seeking a transparent tool to acquire and manage rental properties remotely without informal intermediaries.

Business Model & Revenue Streams

Our profitability is based on diversified revenue streams (direct and recurring):

Revenue Stream	Type	Price Estimate
Property Sales	One-time	35,000,000 to 55,000,000 FCFA / Unit (Land + Smart Villa)
Smart Rentals	Recurring	180,000 to 400,000 FCFA / month
Services & Tech	Subscription	5,000 FCFA / month (IoT Kit Maintenance + Rental Management)

Deployment Roadmap: 2026-2027 Milestones

A rigorous planning schedule to validate the product and accelerate scale-up:

- **Months 1 - 2:** Land acquisition and securing of sites + completion of geotechnical studies.
- **Months 3 - 6:** Construction and eco-building phase of the first 2 model villas.
- **Months 7 - 9:** Hardware deployment of the DOMOYA Kit (IoT) and backend server Django code deployment.
- **Month 10:** Official commercial launch, key handover, and welcoming the first residents.
- **Year 2:** Replication and construction of 6 total residential units (4 new pilot villas).

Financial Projections (5 Years)

Immediate profitability supported by well-managed investments:

Year	Cumulative Units	Revenue (FCFA)	Net Income (FCFA)
Year 1	2	127,200,000	16,483,000
Year 2	6	212,100,000	28,925,000
Year 5	50	950,000,000	180,000,000

- **Profitability:** Generation of positive net profits starting from the very first year of activity.
- **Growth:** Regional scale-up in Year 3 (Togo, Côte d'Ivoire) through organic reinvestment and B2B franchising.

The Management Team

Leading-edge expertise to successfully execute technological and industrial deployment:

Jesugo Abel DOTONOU ***Founder & CEO***

- Graduated Senior Software Engineer, possessing double expertise in Internet of Things (IoT) and complex web frameworks (Django).
- Technical designer of the proprietary IoT Kit and the AIF-OS server architecture.

Strategic Strengths of the Team

- **Dual Competency:** Internal engineering capability (both hardware and software) eliminating dependency on external service providers.
- **Direct Sourcing:** Strategic partnerships for hardware procurement in Asia (South Korea) to maintain an ultra-competitive cost price.

Let's build the future of housing in Africa together.

Join the PropTech revolution with DOMOYA.
